The Problem

Visitor management is still stuck in the paper age

Paper logbooks

Lost records, illegible handwriting, zero audit trail, no identity proof

Slow queues

Manual lookup and phone calls at every entry — visitors and guards both wait

Privacy risk

Indonesia UU PDP (2024) effectively outlaws unmanaged paper visitor logs

Enterprise pricing

Global SaaS starts at USD 29–362 per location/month — far beyond SME reach

Introducing LITEVM

A lightweight, mobile-first visitor management system built for SEA businesses

Visitor pre-registration

Visitors register from any phone — before they arrive

QR-based check-in

Show the QR at the gate; guard verifies identity in seconds

Photo verification

ID card + selfie captured at registration, compared at entry

Real-time reports

Auto-generated visitor logs, exportable to CSV / PDF

Email confirmations

Visitor number and confirmations delivered to any inbox — zero training

ACT Pro integration

Auto-grant / revoke door access rights on check-in and sign-out

How It Works

Three steps from visitor to verified entry

1

Pre-Register

Visitor scans the QR at the lobby or opens the link. Fills details, captures ID + selfie, selects destination. Receives a unique visitor number via email.

2

Arrive & Show QR

Visitor presents the QR code at the gate. The guard looks up the number instantly.

3

Verify & Check-In

Guard matches the ID photo and selfie against the person. One tap to check in; rights auto-granted if ACT Pro is connected. Auto sign-out at end of day.

Visitors Register in Under a Minute
